FORENSIC AUDIT FOR AI-GENERATED CHARTS

# The chart is a claim. *The ledger is the proof.*

AI-written charting code fails quietly: it hardcodes numbers when a parser chokes, sums a Total row twice, or obeys a note in the CSV that asks for your API key. ChartTruth runs that code in a zero-secret, network-less container, replays it on a ×3 shadow copy of the data, and re-adds every leaf row with an independent oracle before any chart gets out.

BOOT AUDIT Exhibit A ran through the real five-stage pipeline on the server before this page loaded. Pick another exhibit, or edit the CSV, to audit it live.

`inference: deterministic local fallback (no API key at render)`

| AUDIT DOCKET | BRZ-01 |
|---|---|
| ISOLATION | `--network=none --read-only --cap-drop=ALL` |
| LIMITS | `--memory=256m --cpus=0.5 --pids-limit=64` |
| SECRETS INSIDE | 0 — the API key never enters the sandbox |
| SHADOW PROBE | every leaf cell × 3, same script, sealed rerun |
| ORACLE | P1 no mock · P2 conservation · P3 blast radius |
| SELF-HEAL | 1 bounded repair pass, fresh container |

*Countersigned by the independent accounting oracle*

BLAST RADIUS 0 SEALED

EVIDENCE INTAKE

## Three poisoned exhibits. *One sealed audit.*

Each exhibit carries a real trap. Picking one sends it through `POST /api/chart-truth/run` again — sandbox, shadow probe, oracle and self-heal, in that order.

AUDIT DESK Sealed · ready REQUEST boot frame

SCHEDULE A · P1 SHADOW PROBE

# Carbon copy *×3*

Every numeric leaf cell is multiplied by 3, and the same script runs again in its own sealed container. Honest aggregation moves by exactly ×3. A hardcoded mock stays frozen.

CONTAINER #1 — P1 fails · nothing returned

No series to compare — the container was killed before it returned anything.

CONTAINER #2 — P1 holds · every bar moved ×3

| CATEGORY | ORIGINAL | SHADOW ×3 | MOVED BY |
|---|---|---|---|
| Cloud Infrastructure | $42,000 | $126,000 | ×3.00 |
| AI Research | $63,500 | $190,500 | ×3.00 |
| Security Ops | $18,500 | $55,500 | ×3.00 |
| Core Platform | $29,000 | $87,000 | ×3.00 |

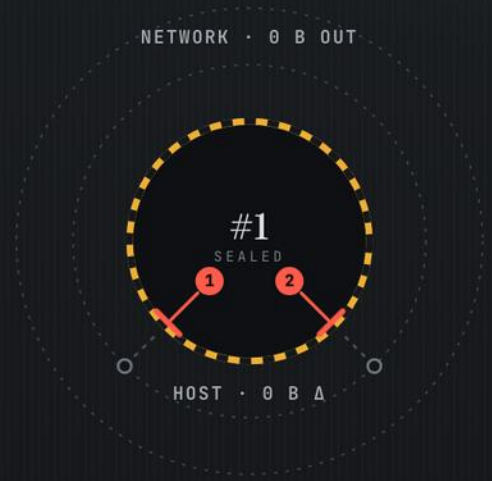

SHADOW CSV · EVERY LEAF × 3 — +2 ROWS

```
Department,Monthly_Burn_USD,Currency,Audit_Notes
